About USUN

Equipment Co Ltd Company Limited specialize and focus on the R&D, design and manufacture of stainless steel instrumentation valves, high pressure valves, control valves, high pressure pumps and boosters with international standard.

The company occupies 54 acres and owns 20,000 square meters of modern workshop and office buildings; an engineering team with more than 6 years of professional fluid control technology; advanced testing and manufacturing equipment; complete quality control system; customer oriented, timely and professional sales team and superior services to provide high quality products and solutions for the global fluid control industry.

USUN passed the ISO9001 quality management system certification and our products passes CE and TUV certification. Our products are recognized by clients and customers in Middle East, European Union, Russia, China and other countries.

After years of hard work, USUN has become an industry leader and has established list of regular customers from around the globe. Our products are being used in oil&gas, petrochemical, energy, mining, aerospace, military, automotive, firefighting and conventional hydraulic machinery Industries.

VMC

usun Air Driven Liquid Pumps

Features

- ★ Up to 100,000 psi (7000 bar) capability.
- ★ Infinitely variable cycling speed.
- ★ Stall feature at pre-determined pressure to hold that pressure without consuming power .
- ★ Easily automated, with many modification and control options available.
- ★ Suitable for most liquids and liquefied gases.
- ★ Can be manufactured to meet CE.

Easy handling

1. Initial operation

The pump is prepared for operation manually:

- ★ Connect supply lines (compressed air, suction and pressure lines).
- ★ Set air drive pressure.
- ★ Open compressed air supply slowly so that the high-pressure pump starts up .

3. Achieve and hold pressure

The pump controls the processes of reaching and holding pressure.

- ★ Pump automatically stops operating when the operating pressure is reached due to equilibrium of forces
- ★ Pressure is held.
- ★ Pressure holding phase with no energy consumption or heat generation .
- ★ Pump restarted automatically if operating pressure drops .

Applications

- ★ Pressure testing
- ★ Jacking and Lifting.
- ★ Valve actuator control
- ★ Hydraulic cylinder actuation
- ★ Roller tensioning
- ★ Precision lubrication and spraying
- ★ Work holding and power clamping
- ★ Liquified gas transfer
- ★ Machine tools
- ★ Well Control Panel

Selection

The pump model is selected according to the use requirements. Such as output pressure, output flow, medium and temperature, available air or gas drive pressure and flow. This guide will help you to pre-select the pump ideally suited for your application. If you have specific questions, Please contact us. We urge you to provide us with details of the duties you require from the pump, available air/gas drive pressure, and pressure/flow requirements, and we will recommend a model and any corresponding accessories.

The series and its functions

USUN pumps offer the right solution for every application. They are suitable for different or stepped flow rates as well as for different maximum allowable operating pressures.USUN pumps with two or three air drive sections reach the same final pressure as a usun pump with one air drive section with 1/2 or 1/3 of the air drive. Double-acting pumps increase the pump capacity by around 50% in comparison to single-acting pumps and reduce the pulsation equally.

The following model variants are available depending on the series:

Pumps With Handle

Angular Pumps

Double Air Drive,Single Acting

Single Air Drive,Single Acting

Triple Air Drive,Single Acting

Single Air Drive,Double Acting

Double Air Drive,Double Acting

usun M Series

Single Drive Single Acting

Features

- ★ Choice of 9 ratios.
- ★ Flows to 8.3 l/min.
- ★ Choice of wetted materials .
- ★ Pressures to 25,000 psi(1723 bar).
- ★ All Hydraulic fluids, water(plain or DI), solvents, mild chemicals, liquefied gases.

OUTLET PRESSURE(PSI)

usun Gas Booster

Features

- ★ Suitable for most gases (Air, N₂, He, CO₂, Ne, Ar, O₂, H₂, CH₄, Natural Gas...).
- ★ Industrial gases like Argon, Helium and Nitrogen can be compressed to operating pressures of 25000 psig (1724 bar), Oxygen to 5000 psig (345 bar), Hydrogen to 15000 psig bar (1034 bar).
- ★ Single, double acting, and two-stage models.
- ★ Reliable, easy to maintain, compact and robust.
- ★ No heat, flame or spark risk.
- ★ Infinitely variable cycling speed and output.
- ★ Air driven boosters are an efficient alternative instead of electrically driven products and can be used in explosion proof areas.
- ★ Easy to apply automatic controls.
- ★ No limit or adverse affect to continuous stop/start applications.
- ★ Seal systems designed for long working life.
- ★ No airline lubricator required.
- ★ Separation between air and gas sections.
- ★ Built-in cooling.
- ★ Ability to stall at any predetermined pressure and hold the fixed pressure without consuming power or generating heat.
- ★ CE
- ★ There is no lubrication in the gas section. It will not pollute the gas and ensure the high purity of the gas.
- ★ The gas supply can be used to extremely low pressure, which improves the gas utilization.

Applications

- ★ Pressure test & leakage test with gas
- ★ Gas transfer
- ★ Charging of nitrogen accumulators
- ★ Supply for isolating gas systems
- ★ Gas assisted injection moulding
- ★ CO₂ foaming
- ★ Transfer of oxygen cylinders
- ★ Life Support Gas Transfer and Charging
- ★ Gas recovery: Pressurize the remaining lower pressure gases in the cylinder or pipeline and fill the gases into a cylinder.
- ★ Compressed Natural Gas (CNG) Boosting for vehicle refueling stations.
- ★ Hydrogen refueling station compresses hydrogen for fuel cell.

Technical specifications

There are two distinct sections: the air drive section and the gas barrel section.

Air Drive Section

Standard Air Drive Seals should perform reliably within a temperature range of (25°F to 150°F) (-4°C to 65°C). Lower temperatures will cause air/gas leakage; higher temperatures reduce seal life.

USUN recommends a minimum Class 4 air quality per ISO 8573.1 standards. For operation at extremely low temperatures, consult factory.

Gas Barrel Section

Low temperatures normally have little effect on the operation of standard parts and seals. The heat from the compressing gas helps to balance out an acceptable temperature. Maximum average acceptable temperature 115°C (240°F). Generally, the built-in cooling adopts exhaust air cooling. That can keep the temperature not exceeding this value. Also cooling by water is available as an option. Suction pressures lower than the indicated "Ps min" are not permitted and can cause damages on the unit. Because each booster has a fixed maximum compression ratio. When the air supply pressure is too low, the gas can not be pressurized to a certain pressure in the high-pressure barrel, causing the booster to reciprocate and fail to output gas. The gas will be compressed and released repeatedly in the high-pressure barrel.

stroke frequency

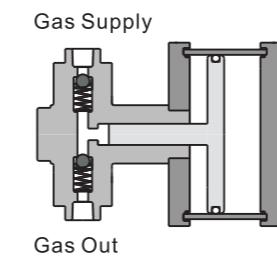

The maximum stroke frequency is at 100 cycles per minute for 50% duty cycle, It is recommended not to exceed 60 cycles/min for long-term operation or heavy-duty applications.

Air Driven Gas Booster Configurations

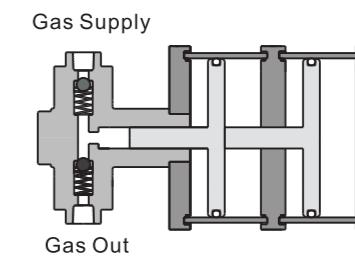

USUN air driven gas boosters have wide range of models it is possible to select the optimum booster for each application. Single stage, double acting or two stage boosters or a combination of these models can be used to achieve different operating pressures and flow capacities. Single acting, single stage boosters are the base model. Double acting, single stage provides twice the delivery of a single acting single stage booster. Two stage models are used for high gas compression ratios.

EXPLAIN

- All model code listed are standard.
- Oxygen gas service add “-O” after the model codes.
- Hydrogen gas service add “-H” after the model codes.
- Replaces all Buna static and dynamic seals in the drive section of the gas booster add “-V” after the model codes.
- With external pilot port on air drive section add “-X” after the model codes.
- With external pilot port on air drive section& pressure switch add “-XS” after the model codes.
- Other sizes, materials and types are available upon request. For special requirements, please contact us.

usun 2AGB Series

Double Drive Single Acting

Features

- ★ Choice of 3 ratios.
- ★ Max. air drive pressure $P_a = 150$ psig(10.3 bar).
- ★ Choice of seal materials.
- ★ Higher outlet pressure to 20000 psig(1379 bar).
- ★ No lubricator required.

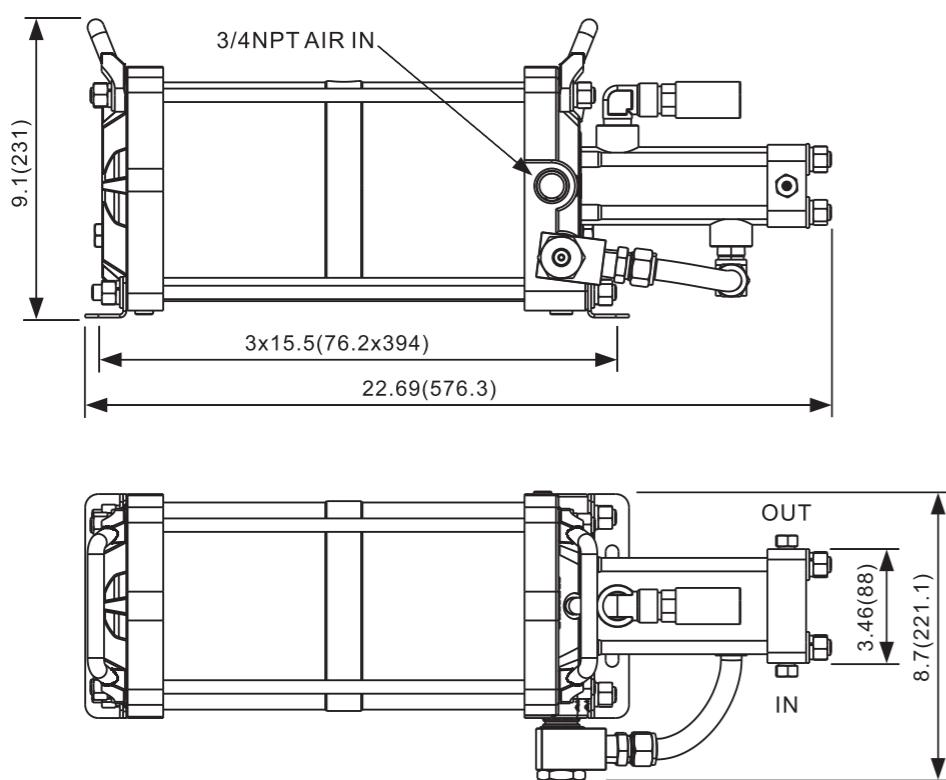

Performance and Specification

Booster Model Code	Max.Rated Gas Supply	Min.Rated Gas Supply	Max.Rated Gas Outlet(psig)			Actual ML Per Cycle	Outlet Stall Press. Formula	Compression Ratio Max.	Inlet & Outlet Gas Ports
			Inert Gas	Hydrogen	Oxygen				
2AGB60	9000psig	200psig	9000	9000	5000	51ML	60 Pa	25:1	1/4"HF
2AGB100	12000psig	100psig	12000	12000	5000	32ML	100 Pa	25:1	1/4"HF
2AGB150	20000psig	250psig	20000	15000	5000	20ML	150 Pa	25:1	1/4"HF

HF means female high pressure connection.

EXPLAIN

- All model code listed are standard.
- Oxygen gas service add "-O" after the model codes.
- Hydrogen gas service add "-H" after the model codes.
- Replaces all Buna static and dynamic seals in the drive section of the gas booster add "-V" after the model codes.
- With external pilot port on air drive section add "-X" after the model codes.
- With external pilot port on air drive section& pressure switch add "-XS" after the model codes.
- Other sizes, materials and types are available upon request. For special requirements, please contact us.

Performance Curves — air drive source of approximately 90 psig

usun AGBD Series

Single Drive Double Acting

Features

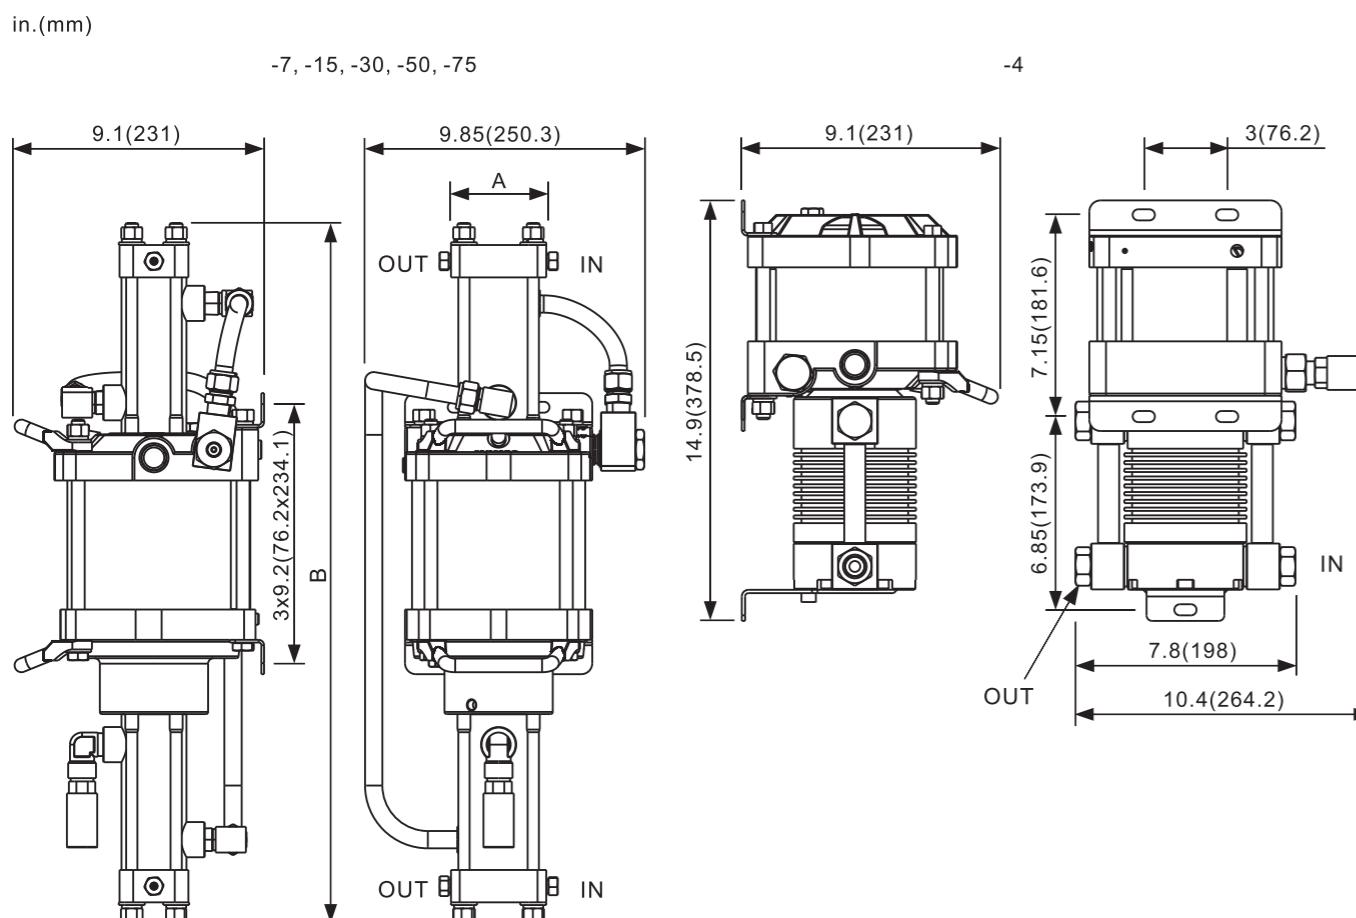

- ★ Higher efficiency than single-acting boosters.
- ★ Max. air drive pressure $P_a=150$ psig(10.3 bar).
- ★ Less restriction on gas supply pressure P_s .
- ★ Choice of seal materials.
- ★ Pressure to 15000 psig(1034 bar).
- ★ No lubricator required.

Performance and Specification

Booster Model Code	Max.Rated Gas Supply	Min.Rated Gas Supply	Max.Rated Gas Outlet(psig)			Actual ML Per Cycle	Outlet Stall Press. Formula	Compression Ratio Max.	Inlet & Outlet Gas Ports
			Inert Gas	Hydrogen	Oxygen
